Ms. Marlene H. Dortch, Secretary
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Re: IB Docket No. 11-109

Dear Ms. Dortch,

I am writing in regards to Light Squared's 4G-LTE network, in the hopes that the FCC will back the plans. This network would be a professional asset to me and so many others in the state.

My work in the technology industry changes everyday. There are weeks when I get more calls then I can respond to and others when there is not much work at all. Especially in those slow times, it is important to me to have constant contact with my clients so that I can respond quickly to their needs. In a technologically fueled world, my clients are at a loss when they do not have access to their technology. When they have setbacks they count on me to get them back to working order as fast as possible. And if I cannot confirm my availability quickly they will find someone who can.

Not only does this allow me to remain in touch with my clients, it puts me in a place where I can be updated in the very newest developments in my industry. As communications technology constantly evolves, so too must my knowledge. A phone that updates and allows me to read new articles and blogs from the palm of my hand is a value that cannot be surpassed.

It is clear how necessary it is for my phone and email to be constantly updated, regardless of what part of the state I am working in. On a 4G-LTE network I would be constantly connected, giving me the edge I need for my job.

Sincerely,

Ben Kelly
